TRUSTEES' REPORT.

To His Honor the Lieutenant Governor, Acting Governor, and the Honorable Council.

The trustees of the Worcester Lunatic Hospital respectfully submit this sixty-fourth annual report, and also the report of the superintendent and treasurer, with statistical tables which explain in detail the affairs of the institution.

In our last report mention was made of the fact that plans were under consideration for enlarging the scope of the medical work of the hospital, in adding a training school for the assistant physicians and a limited number of internes, - young men who might wish to perfect themselves in a knowledge of nervous diseases. This was deemed a step in the right direction, and was cordially approved by the trustees. are now in a large measure perfected, and the new department will be opened with the beginning of the official year under the especial charge of Dr. Adolf Meyer, who entered upon his service at the hospital early in November. During the summer Dr. Meyer visited Europe, accomplishing an incredible amount of work, and bringing back with him the latest results of the progress made by students in the old world. He selected much apparatus for the new laboratory, which has been fitted up and which will no doubt prove a very useful adjunct in the daily work of the hospital.

For many years the hospital has been so crowded with patients that the officers have been overwhelmed with routine duties. The material wants of the large colony—equal to the whole of Massachusetts in early Colonial days—have made it impossible to give to individual cases the special care and attention which would have been gladly devoted to them. The internes will assist in the laboratory and aid in clinical work,

thus relieving the regular staff of physicians from much routine labor, and enabling them to devote more time to special cases. Increased opportunities bring increased wants, and public institutions should keep pace with the march of improvement. In order that we may do this, we must solicit aid from our guardian, the State. Among so large a number of people, either in or out of the hospital, there is always more or less Insanity often arises from mere physical weakacute illness. ness. The wards primarily intended for such cases are of limited capacity and are now entirely outgrown, so that sick persons are found in almost every hall. All such cases need to be treated as they are in a general hospital, — with special care, special nursing and special diet. It is scarcely possible for an attendant to take proper care of a sick person in a ward, where the conditions cannot be controlled. Therefore, we must have a new infirmary ward. This was referred to in the superintendent's report for 1894.

The medical work, as now provided for, requires that all cases received into the hospital should be under close observation and critical examination, before being assigned to their respective classes. In the new infirmary this will be provided for.

As one part of an institution is outgrown, so is another. Thus, the kitchen and executive department no longer afford necessary facilities. Originally designed for a far smaller family, all the space is more than occupied. The time has now come when it is absolutely necessary to have more room for carrying on the work of this all-important branch of the institution in a successful and economical manner. This change can be made in connection with the other additions now contemplated, and will give ample space for the help employed, and give us work rooms for patients. The rooms formerly so used have been taken for dormitories, on account of the crowded condition of the hospital.

Appliances for making work attractive to the patients are greatly needed. The central thought of the institution is how best to treat and cure the demented. The successful solution of the question touches a most important problem. Congenial work is the basis of contentment. "Something to do" stimulates the mind and gives zest to life. If the thoughts of the insane can be diverted away from self, and they can become

occupied in some form of manual labor, a great advance will be made towards restoring their mental balance. For many, alas, there is no cure; and for many there can only be unrest and discontent until the tired brain ceases to act. Hospital or palace, alike, would fail to satisfy them. There are others, however, who respond to a proper stimulus, and will gladly avail themselves of an opportunity of agreeable employment.

As to the cost of these desired changes and improvements; the matter has been carefully looked into by the trustees, the superintendent and the heads of the various departments, with the result of having obtained plans which will meet our needs. The expense has been carefully estimated, and we feel certain that an outlay of \$160,000 will cover the cost of erecting the additions and kitchen, besides furnishing them. We therefore respectfully ask that the Legislature grant the sum for the needed additions, thereby greatly increasing the capacity and usefulness of one of its most vital institutions.

The hospital has been managed with great efficiency by Dr. Quinby and his able corps of assistants. There has been no epidemic, and no more sickness than is usually incident to so large a community. The perfect neatness, order and cleanliness of the entire establishment are to be highly commended. That, with so changeable and erratic a family, every corner, closet and drawer should bear inspection, is a marvel of house-keeping which may well be admired.

Dr. Laure Hulme has resigned, after seven years of faithful service, and her place has been filled by Dr. Margaret A. Fleming, whose kind and sympathetic influence is felt by the patients.

The year was saddened for us by the loss of our honored and lamented governor, who took a personal interest in the prosperity of the hospital and the comfort and welfare of its unfortunate inmates.

LAND ACCOUNT.

Respectfully submitted,

ALBERT WOOD,

Treasurer.

Ост. 1, 1896.

Worcester, Mass., Oct. 23, 1896.

I hereby certify that I have this day compared the treasurer's statement of disbursements for the year ending Oct. 1, 1896, with the vouchers on file at the Worcester Lunatic Hospital, and believe it to be correct. I have also inspected the securities representing the invested funds of the institution, and find that their market value is as stated.

GEORGE L. CLARK, Auditor of Accounts.

SUPERINTENDENT'S REPORT.

To the Trustees of the Worcester Lunatic Hospital.

I herewith respectfully submit the following report of the hospital for the year ending Sept. 30, 1896, it being the sixty-fourth annual report.

There remained at the hospital Oct. 1, 1895, 961 patients, -455 men and 506 women. During the year 281 men and 295 women were admitted, 303 men and 266 women were discharged and 56 men and 51 women died, leaving at the end of the official year 861 patients, -377 men and 484 women. this number, 133 were supported by the State, 474 by cities and towns and 154 by friends. Of the 569 discharged, 107, including 9 habitual drunkards (women), were reported recovered; 82 were much improved; 91 improved; and 288, including 1 habitual drunkard (woman), not improved; 1 woman was discharged not insane. Fourteen men and 11 women were removed by the overseers of the poor; 38 men and 31 women were discharged to the care of the Board of Lunacy and Charity, to be removed from the State; 5 men and 37 women were transferred to Tewksbury; 2 men and 1 woman to the Boston Lunatic Hospital; 21 men to the State Farm: 110 men and 64 women were transferred to the Medfield Insane Asylum; and 1 woman was boarded out. One man was discharged by the superior court and 1 woman was returned to the Reformatory Prison for Women. Seven men escaped, and were not returned to the hospital at the end of the official year.

There were 64 more admissions than in the previous year and 4 less deaths, but owing to the large number of discharges there were present at the close 100 less patients than at the beginning of the year.

The daily average number was 956.25. The highest monthly average was 1,037.06, and the lowest 840.16.

The percentage of recoveries, calculated upon the average number of the discharges and deaths, was 15.85; calculated upon the number of admissions, it was 18.58.

The death rate was 11.19, calculated upon the average number of patients; and 6.96, calculated upon the total number under treatment.

The number of deaths is slightly less than last year. There has been the usual large fatality among those suffering from general paralysis, 25 of this class having died from exhaustion or from some complicating disease, as lobar or bronchopneumonia, which, separately, were the cause of death in 5 cases of paresis and in 7 cases of other chronic brain disease. Phthisis was the cause of death in 13 cases, the same number as last year. One man committed suicide by hanging. This patient had been an inmate of the hospital fourteen years, and was not considered suicidal.

At the beginning of the last official year preliminary steps were taken towards reorganizing the entire medical work of the hospital. This was to include an exhaustive examination, after a uniform method, of each patient upon entrance; fuller and more accurate records; the more careful observation of recent cases; and the employment of laboratory methods as aids in diagnosis and treatment, — methods which have proved so useful in general hospitals.

As there is, at present, no medical school in this country which gives its students anything more than the most elementary training in nervous and mental diseases, our assistants, however well instructed they may be in general medicine, come to us with but little knowledge of the principles which underlie one of the most complicated of specialties. After coming to the hospital, the assistants, in their daily rounds of the wards with the superintendent or the junior assistant, gain, it is true, much information as to the various forms of insanity, the general management of patients and the discipline and supervision of the wards; but, as these rounds are often hurried and frequently interrupted, little opportunity is given for more detailed instruction, for a minute examination of each case and for the weighing of separate symptoms with reference to their bearing

upon the diagnosis. These points they are obliged to work out for themselves, and this cannot be done without a great deal of study and research on their part; and later on, when they come, as they are sure to do, to find their time more and more occupied with routine duties, they are apt to neglect their scientific promptings and content themselves with the proper performance of their ever-pressing clerical and household duties. It seems essential, therefore, to establish, at the outset of our undertaking, a training school for assistants; and the immediate supervision of this work was placed in the hands of Dr. Adolf Meyer, who, as mentioned in my last report, entered upon service at the hospital, as assistant, November 15.

During the winter a series of lectures upon the nervous system were given to the assistants, and much time was also spent in the wards, instructing them as to methods of case taking, and in concise and accurate recording at the bedside of the results of their observations. They were also instructed in methods of preserving and examining the nervous tissues, and had the opportunity of being present and assisting at some twenty or more autopsies, and of attending a series of nine lectures given at the hospital by Dr. Meyer to the students of Clark University, in his capacity as docent to that institution. Meanwhile, much time was devoted to organizing the laboratory, determining the scope of the work to be undertaken therein, and in deciding as to what methods were best suited to render it supplementary to the clinical work of the wards. Much attention was also given to plans for rearranging the duties of the assistant physicians, that they might be relieved, either wholly or partially, of certain of their routine duties, such as correspondence with the friends of the patients, keeping records, etc., - and additional time might thus be gained for their more strictly professional work. In pursuance of this plan, the old method of keeping the records has been abandoned, as much valuable time was consumed in compiling them, they being, after all, of little practical value, except as they noted the time of admission and discharge of patients and their general condition while at the hospital. Made up, as they were, from the assistant's recollection of the case, and written out days and sometimes weeks after the occurrence to be noted had passed, they failed to give anything like an adequate medical picture of the disease, or to furnish any exact data upon which to found a diagnosis or from which the method or result of treatment could be gathered. Hereafter, the record keeping, so far as the assistant physicians are concerned, will be confined largely to notes dictated at the bedside during their daily rounds. Arrangements have also been perfected to reduce the labor of correspondence to a minimum.

Notwithstanding these efforts to economize the time of the assistants and to limit their duties, as far as possible, to strictly professional work, it has been found that much of the day was still of necessity occupied with the discipline and oversight of the wards, in devising methods for the employment and recreation of the patients, in seeing that their material needs were provided for and in interviews with friends, - duties which neither could be neglected nor delegated to others. The assistants still lacked time for that minute personal observation of their patients, necessary for the careful working out of each individual case after the exhaustive plan which we have undertaken. It thus became evident that additional help was needed, and it was decided that this want would be best satisfied by the appointment of a corps of internes, whose duties should be to compile and record an exhaustive history of each case upon entrance; accompanying the assistant on his medical rounds; take notes of cases at his dictation; make urinary analyses, bacteriological tests and examinations of the blood and sputa when indicated, and assist at autopsies and the general work of the laboratory. They should share in the instruction given the assistant physicians, and have time and opportunity afforded them to do special laboratory work. Such a plan would no doubt prove of great advantage to the institution, as it would furnish material from which to select assistant physicians already trained for the work. With the approval of your Board, an announcement was sent out early in the summer, stating that four internes were wanted at the Worcester Lunatic Hospital, the same to be selected after a competitive examination. number of letters received (some forty or more) in reply to this announcement was satisfactory in the extreme, proving, as it did, that there are enough young men anxious to avail themselves of such an opportunity, and that we should have no difficulty in filling these places. Although many of these would-be

applicants were deterred from appearing at the competitive examination by the conditions imposed (that they should have had a collegiate and full medical education and a reading knowledge of French or German, or both, and preferably some general hospital experience), we were able to select four men possessing the necessary qualifications, and these, after having passed a satisfactory examination, received their appointment and began work October 1.

In April Dr. Meyer went abroad in the interest of the hospital. He visited first the most noted Italian hospitals for the insane and neurological laboratories; the clinics of Professor Bianchi in Naples; the large hospital at Reggio-Emilia, under the direction of Professor Tamburini; the clinics of Morselli (Genoa) and Lombroso (Turin), and the new asylum at Quarto near Genoa; further, the neurological and physiological laboratories of Professor Mingazzini and Professor Luciani in Rome, Professor Fano and Dr. Bottazzi in Florence, Professor Giacomimi and Professor Mosso at Turin, and the pathological laboratory of Professor Golgi at Pavia. Six weeks were spent at Heidelberg, at the clinic of Professor Kraepelin and in the laboratory of Professor Arnold; and a visit was paid to the new clinics at Giessen (Professor Sommer), Würzburg (Professor Rieger) and Strassburg (Professor Fürstner). On this occasion the laboratories and methods of Professors Goltz and Ewald in Strassburg, Professor von Kölliker at Würzburg and Professors Weigert and Edinger at Frankfurt-am-Main were studied. During the month of July Dr. Meyer worked in the laboratory of Professor von Monakow and the clinic of Professor Forel at Zurich. He next visited Professor Dejerine at the Salpêtrière in Paris, and several of the English and Scotch hospitals; Professor Mott's new laboratory for the London County Asylums; Dr. Robertson in Morningside, Dr. Alexander Bruce in Edinburgh, Dr. Yellowlee in Glasgow, Dr. Rorie in Dundee and Dr. Hyslop at Bethlem Hospital. Owing to the courtesy of the men mentioned, a fair picture of the present status of methods, etc., was obtained. He returned to the hospital early in September, and the time since his return has been occupied in arranging the laboratory and further perfecting our plans, so that now everything is in order, and we are ready with the opening of the official year to begin work after the new methods.

The interest and enthusiasm manifested by every one concerned argues well for the success of the new enterprise. Five rooms have been fitted up in the basement of the executive building, near the general office and easily accessible therefrom. One of these rooms is to be especially devoted to the use of the internes and the medical staff, and will furnish a place where they can get away from the bustle and confusion of the general office for the purpose of reading and study. In this will be placed the reference library and its accompanying card cata-The adjoining room has been fitted up as a general microscopical room, and is equipped with necessary microscopes, the latest and most approved instruments for enlarging and drawing microscopical preparations and a complete apparatus of photo-micrography. A dark room with running water and all the necessary appliances for photography connects the microscopical room with the general work room, in which are the usual freezing apparatus and the necessary microtomes for cutting both small and large brain sections. Separated from the general work room by a corridor is the chemical room, with sterilizing apparatus and appliances for bacteriological and chemical investigations. It has been our purpose to exercise due economy in fitting up the laboratory, and to buy only such instruments as will meet our immediate needs; but there will be added, from time to time, whatever appliances may be found necessary or useful for the work in hand.

The present working plan lays the chief weight on a careful study of the symptoms and needs of the patient, and upon the laboratory as a help for doing justice to the daily increasing complexity of diagnostic and therapeutic problems, without which clinical medicine is unable to exist and much less to The lines of work in the laboratory must be suggested by the work in the wards, and, in order to achieve this, the idea of having a special pathologist out of contact with the clinical work was not deemed to be adequate to the needs of the institution. In order to have a uniform and methodical working plan, the supervision of the purely medical work in the wards and of the laboratory has been united in the hands of Dr. Meyer. We have expended in this work, including the outlay for the library, some \$3,000. creased salaries and the necessary running expenses can be easily met from the current income of the institution.

We still lack a training school for nurses, a feature which has justly come to be regarded as necessary in every properly appointed hospital. That such a school has not already been established here is through no lack of appreciation on our part of its necessity, but was due partly to the feeling that this other work which we have long had in mind and which is now so happily inaugurated might justly claim the precedence, and partly to the fact that the crowded condition of our house for the past four or five years has made it impossible for us to find proper room for our attendants or to give them the time and quiet necessary for study. Now, however, that the hospital is relieved of the pressure of overcrowding, and is likely, as we are happy to believe, to remain so for some time to come, we shall hope to have such a school in the near future; the need for which will be still more imperative if we add hospital wards to our present accommodations, as we hope to do during the coming year. I may be allowed in this connection to quote from my report of 1894, in which I called attention to the fact that: -

Our wards are so large and our numbers so great that it is difficult to secure always the isolation and special care which recent cases demand, unless the friends of the patients are able to provide them extra attendants and private quarters. Patients are from necessity often brought into intimate contact, at the most critical period of their disease, with the turbulent and with those whose minds are full of morbid notions in regard to themselves, the hospital and their treatment; and the example and influence to which they are thus subjected tend largely to counteract the best efforts of the physician and attendant, and no doubt frequently retard or even preclude recovery. Our present sick ward was planned to meet the wants of a limited number of patients, and we have now entirely outgrown its capacity, and are obliged to place many of our acute sick on wards not arranged for such cases. With our present number of inmates we should have a hospital ward distinct from the main building, conducted upon the lines of a general hospital, with a corps of trained nurses and all modern appliances for the treatment of nervous diseases. With a view to supplying this want in the near future, your Board has authorized me to procure plans for the necessary buildings, together with an estimate of the cost of the same.

Such plans have now been perfected and have met the approval of your Board. They provide for two buildings, one to be devoted to men and the other to women; each is four

stories high, and is to be built in front of, and as an addition to, the wards nearest the executive building, but entirely separated therefrom. These additions are to be sixty-two feet deep, and will conform, as to the exterior, to the present architectural features of the building. Each story will contain an infirmary ward for ten patients, together with two rooms for isolating acute and noisy cases, and the necessary toilet rooms. By making slight alterations, that portion of the old ward immediately adjacent to the new building can be utilized as a part of the latter, and in this will be located the day rooms, clothes rooms and service rooms. An easy exit from the wards is furnished by an iron staircase, and there is on each story a balcony, properly protected, for the use of such sick and infirm patients as are unable to otherwise enjoy the open air. Each building will accommodate forty-five patients, and will cost \$40,000. This will include the necessary alterations in the old ward and the building of an iron staircase in place of the present one.

It is very desirable that the recent cases and all those whose condition requires daily or more frequent observation on the part of the physicians should be within easy reach of the general office and as little scattered as possible. This requirement can be readily provided for in connection with the new infirmary ward.

The necessity for increased facilities in our general kitchen and for more room in the department devoted to outside help has been long recognized; but we have hesitated in taking any steps towards remedying this, on account of the material expense that it of necessity involved, since no adequate relief can be gained except by enlarging and entirely remodelling both of these departments. The time has come, however, when such a change is imperative. Our ovens and all of our cooking utensils are now run up to their utmost capacity, and even then it is often with the greatest difficulty that we can provide sufficient food for our large family, or distribute it to the various wards with that promptness which is necessary to insure its coming to the table in a hot and palatable condition. Run at this high tension, one or more of our ovens or any of our cooking utensils is liable to give out at any time, and place us in a serious dilemma.

The increase in our medical staff necessitates additional servants, but we no longer have any place where we can accommodate them. The dining room is already overcrowded, and many of the living rooms are barely tenantable, especially in the winter months, on account of dampness caused by the steam from the pipe ducts in the basement condensing upon the walls. For these and for many other reasons which it is unnecessary to enumerate here, we feel that we should be doing injustice to the institution and those for whom we have undertaken to care if we should allow these defects to go on longer without making an effort to remedy them. We have therefore drawn up plans of such alterations and additions as seem to meet the necessities of the case. This building will be 99 by 80 feet, four stories high, and of fireproof construction; and besides the kitchen and bakery, which will occupy the whole upper story, there will be additional store-rooms, rooms for help, and two large work rooms, 24 by 76 feet, in which provision will be made for the employment of patients. It is estimated that this addition, including the building of a temporary kitchen, will cost \$72,000.

The new farmhouse has been opened and occupied by patients nearly a year, and has proved quite as much of a success as was anticipated. On account of the absence of locked doors, grated windows and the other safeguards usual in hospitals, it was feared that it might be found impracticable to here provide for all those willing to work upon the farm, and that it would still be necessary to lodge some of our farm hands at the hospital, on account of their turbulent character and disposition to wander away; but we have thus far found little or no difficulty in either of these directions. All the patients seem very much pleased with their new quarters, and have caused no disturbance, and but two have attempted to escape.

As regards the income from the farm, no just estimate can be formed by comparing this year's report with that of previous years, for the reason that the cost of support of the patients there employed appears in this year's farm account, as it has not done heretofore. Everything bought for the farm or used at the farmhouse has been charged to the farm account (except the clothing issued to the patients), and everything produced thereon has been passed to its credit at a fair market value.

The expenditures for the past year exceed the receipts by \$1,468.79; deducting from this the supplies on hand and paid for, there remains a net deficit of \$1,087.24. The season, however, has been an unusually poor one for all farm products, and our income has been correspondingly small. Another year we can reduce somewhat our running expenses at the farmhouse, and, with the income which may be relied upon in the average season, the farm can no doubt bear the charge of the support of the patients working thereon, and still show a balance on the right side.

The current expenses for the year, less the amount received for articles sold, have been \$163,040.43; dividing this by 956.25, the daily average number of patients, gives \$170.50 as the annual cost of support, which is equivalent to a weekly cost of \$3.27.

The only change in our medical staff during the year is the resignation of Dr. Laure Hulme, who had been seven years in the service of the hospital as assistant physician. The vacancy thus occasioned was filled by the appointment of Dr. Margaret A. Fleming, who entered upon her duties Dec. 11, 1895.

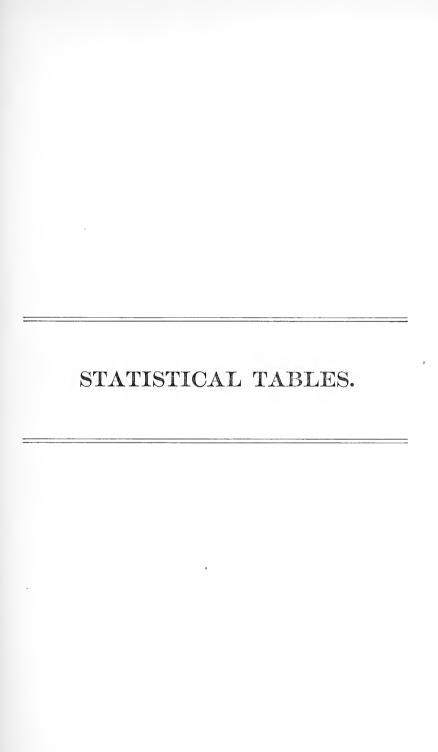

We are indebted to the publishers of the "Worcester Daily Spy," the "Worcester Evening Gazette," the "Fitchburg Sentinel," the "Essex County Mercury," the "Lynn Transcript," the "Christian Register," "Zion's Herald" and "White Ribbon" for copies of their papers.

The addition during the year of such a large number to our official family made many changes necessary in our household arrangements, but these changes have been for the most part cheerfully acquiesced in, and each has shown a disposition to concede something for the mutual good. This attitude on the part of the assistants, the evident interest with which they have entered upon the new work, together with the uniform encouragement and support which I have always received from your Board, has made my work a pleasure rather than a task.

H. M. QUINBY,

Superintendent.
